VIGNESH MADASAMY

Computer Science & Engineering Undergraduate

Karur, Tamil Nadu, India

+91 89031 76646 • vigneshmadasamy22@gmail.com

PROFESSIONAL SUMMARY

Computer Science and Engineering undergraduate with hands-on experience building web applications and a strong foundation in data structures, algorithms, DBMS, Python, Java and object-oriented programming. Interested in software engineering and artificial intelligence, with a practical approach to learning and turning concepts into working projects.

TECHNICAL SKILLS

Programming: Python, Java, C

Core CS: Data Structures & Algorithms, OOP, DBMS, SQL

Web Development: HTML, CSS, JavaScript, React, Node.js

Backend & Tools: Supabase, Git, GitHub

Interests: Artificial Intelligence, Machine Learning, Software Engineering

EDUCATION

B.Tech — Computer Science and Engineering

Amrita Vishwa Vidyapeetham, Nagercoil | Expected 2029

INTERNSHIP & TRAINING

Machine Learning with AI — Internship / Online Training

Internshala Trainings | Apr 2026 – May 2026

• Completed an 8-week online training covering Python programming, data analytics and machine learning fundamentals.

• Worked with supervised learning concepts including regression and classification, along with unsupervised learning and clustering.

• Explored AI tools and practices used across the machine-learning lifecycle; scored 90% in the final assessment.

PROJECTS

EventHub — Full-Stack Event Management Platform | *React, Node.js, Supabase, HTML, CSS, JavaScript*

• Developed a full-stack platform for discovering and organizing events across categories such as weddings, birthdays, parties and seminars.

• Implemented user and organizer workflows with authentication, event creation, booking management and profile-based interactions.

• Integrated Supabase for backend services and structured data management, with a responsive interface for desktop and mobile users.

Online Quiz Management System | *Java, OOP, Data Structures*

• Built a terminal-based quiz application with registration, login, timed questions, randomized question selection and result tracking.

• Applied object-oriented programming concepts to structure the question bank, quiz flow, timer handling and scoring logic.

• Implemented automatic question progression when the timer expires.

Student Performance Prediction System | *Python, Pandas, NumPy, Scikit-learn, Matplotlib*

• Developed a machine-learning application to analyze student academic data and predict performance using Python.

• Performed data cleaning, preprocessing, exploratory analysis and feature preparation with Pandas and NumPy.

• Trained and evaluated regression/classification models and visualized key patterns for data-driven insights.

CERTIFICATIONS

• NPTEL — Fundamentals of Object Oriented Programming

• NPTEL — Object-Oriented Programming / Java certification
